## ***TIRE SAFETY AND MAINTENANCE INFORMATION***

Important safety Information: This manual is not intended to provide training or service procedures for mounting, balancing, dismounting or rotation of your tires. These functions should only be performed by qualified tire service professionals.

**The most important factors in tire safety, performance and service life are:**

- **Proper tire size, type, and load capacity (or load range)**
- **Proper inflation pressure**
- **Proper vehicle loading**
- **Regular tire rotation**
- **Regular inspection**
- **Proper tire repair**
- **Vehicle condition, alignment and maintenance**
- **Good driving habits**

Proper Tire Inflation - The recommended inflation pressures for tires are typically measured in pounds per square inch (psi) and are indicated on the vehicle tire placard, certification label or in the owner's manual. Inflation pressure should be checked at least once per month with an accurate tire gauge and when tires are cold.

Regular Tire Inspection - In addition to maintaining inflation, regularly inspect the tire tread and sidewalls for irregular tread wear, cracking, scrapes, bulges, cuts, snags, foreign objects or other damage resulting from use. It is recommended that tires, including the spare, be periodically inspected by a tire service professional during routine maintenance intervals such as oil changes and tire rotations.

More information regarding these factors can be found in the Tire Care and Service Manual published by the Rubber Manufacturers Association (RMA) and found on their website [www.rma.org](http://www.rma.org).

Additional tire safety information can be found at [www.safercar.gov](http://www.safercar.gov)
